

WINDOWS, MAC & TABLET COMPATIBLE

HTS2 Binocular Vision Therapy

Computerized At-Home Therapy Program

HTS2 home binocular vision therapy program is the perfect companion to the RightEye Sensorimotor system when CI issues are detected. It can be used as an adjunct to in-office therapy or as a stand alone at-home therapy program.

HTS2 runs on any iPad, Android, Chromebook, Windows 7-10, Mac OSX, and any other device/tablet that is 7.5 inches in width or greater. The ease of operation, proven efficacy, automatic monitoring, and affordable price all allow you to immediately offer an extremely profitable new service to your patients. Your first HTS2 order will include a complimentary doctor's kit containing everything you need to immediately start offering HTS2 to your patients.

The HTS2 Program is Fully Automated and Easy to Use. Procedures include:

- Pursuits
- Saccades
- Base-In/Base-Out Vergence
- Jump Ductions
- Jump Ductions Random
- Base-Up/Base-Down Vergence
- Accommodative Rock

Over 2,500 doctors have dispensed more than 200,000 HTS2 patient kits.

Get a 7-Pack of Patient Kits for just:
\$359.70 Shipping not included

Recommended list price to the patient is \$250-\$300 per kit.

That is a 6:1 return on investment!

EASY MONITORING

The HTS2 program provides graphs depicting each session's performance. The program displays date, time, duration and performance of each therapy session. HTS2 denotes when your patient has performed therapy and also if it was performed correctly.

PROVIDES MOTIVATION

HTS2 presents your patients with bar graphs showing therapy goals. Performances from their last and current sessions are displayed. HTS2 virtually "pats the patient on the back" encouraging them to try harder.

TOTAL CONTROL

Dispense the HTS2 program in the Auto Mode and the program will automatically advance patients through successive levels of therapy as goals are achieved. The Manual Mode allows you to assign your own custom protocol.

PROVEN PROCEDURES

The HTS2 program is the only vision therapy device using scientifically proven methods of behavior modification (operant conditioning). The program uses random dot stereograms and other objective targets. HTS2 "knows" if your patient has performed the prescribed home therapy correctly

Simply log onto HTS2 to see a list of all of your patients. You may view their results, check compliance, modify their program, or send notes right from your computer

FLAT FUSION

Patients who cannot appreciate an RDS may be assigned a host of Flat Fusion targets. The patient may select the target they wish to use for each therapy session.
